

# The Tree Next Door

Follow the instructions below to create your own 3D sustainable paper star Christmas decoration.

You can also view our 'How To' video on the Little Tiger website for extra guidance.

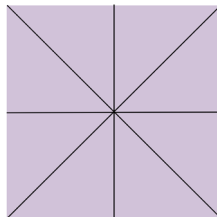

How To video:

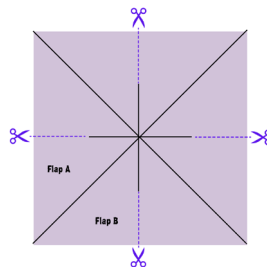

## Materials needed:

- Two squares of paper (we've provided some scrap paper, but you can also use old proofs, damaged stock or any odds and ends that you have lying around!)
- Glue (PVA works best)
- Scissors

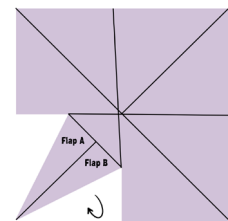

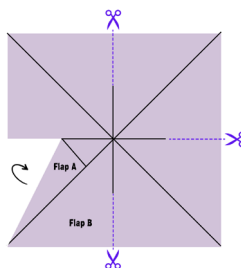

**Step 1** • Fold the paper square in half horizontally and then fold it in half diagonally – to create the below fold pattern.

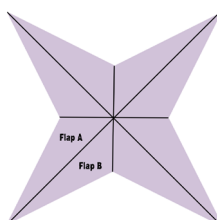

**Step 2** • Cut half-way along the four central folds, using the dotted lines as guidance.

**Step 3** • Fold Flap A and Flap B inwards to the fold line to create the first point of the star.

**Step 4** • Repeat Step 3 to the remaining flaps to create three more points of the star.

**Step 5** • Glue the top face of Flap A to the bottom face of Flap B, securing the point. This will help to make it three dimensional.

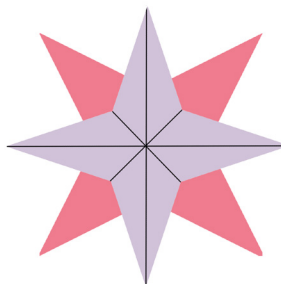

**Step 6** • Repeat Step 5 for all remaining points of the star.

**Step 7** • Repeat Steps 1 – 6, creating a second star.

**Step 8** • Glue the base of all the flaps on Star 1 and also on Star 2. Then stick both stars together at an angle, creating the below shape. Your star should have eight points!
